

## Innovation Portfolio Management

FLIGHTMAP is Bicare's strategic portfolio management solution. FLIGHTMAP enables better decisions about the innovation portfolio, and leads to more value creation.

Bicare's extensive expertise in innovation management has resulted in FLIGHTMAP, a portfolio management solution that is unique in 3 ways:

### Fits decision makers' needs<sup>1</sup>:

- Support the business decisions about the project and product portfolio efficiently;
- Align business plans and innovation roadmaps with strategic business growth goals;
- Compare and consolidate business cases in a consistent and transparent way;
- Optimize the product portfolio on a variety of constraints and KPI's;
- Connect innovation pipeline and product lifecycle management processes;
- Drive a transparent and accountable decision workflow with proper governance.

<sup>1</sup> Bicare's longstanding experience in industry sectors including high-tech, chemicals, life sciences, and automotive has confirmed the applicability of the FLIGHTMAP analysis models and workflow processes for the real innovation portfolio management challenges across sectors, geographies, and functions.

## Powerful analysis capability:

- Focus on the big picture, with support for relevant details where needed (sensitivity analysis);
- Includes all relevant drivers of the business cases (timing, risks, resourcing, but also explicit market and technology trends, and business model options including recurring revenues and partnering);
- Compare forecasts with actuals and signal relevant deviations;
- Full financial projections at project and at portfolio level (real-time P&L, NPV, ROI);
- On-the-spot what-if analysis against resource constraints and budgets.

## Easy to use and deploy:

- Intuitive user interface with pre-set analysis charts (such as innovation funnel, pipeline growth, in addition to bubble plots);
- Practical task overview to guide users through the decision process;
- Agile quick start deployment (data available and first analysis results in weeks, not months, including configuration to each client's processes and business);
- Can be linked to various operational systems gradually (with a range of options from loose to tight coupling);
- Attractive all-in pricing structure for the fully secure hosted SaaS implementation (at real "zero IT cost").

Reference customers in Europe for FLIGHTMAP, including DAF Trucks, TomTom, and Canon/Océ, support FLIGHTMAP's unique strengths in portfolio management.

More information about FLIGHTMAP is available via [www.flightmap.com](http://www.flightmap.com), including a life demo environment, client cases, and detailed datasheets and tutorials with FLIGHTMAP's capabilities and connectivity options.
