

Enhanced Roadmap chart

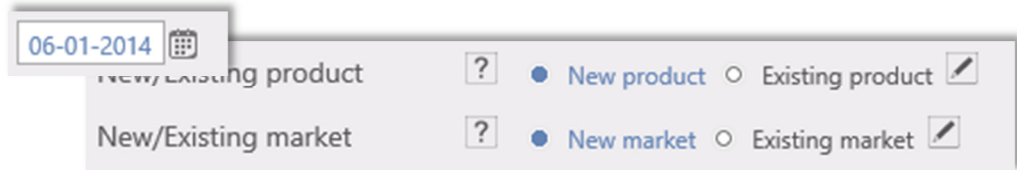

Feature	Description
Roadmap chart	The roadmap chart is enhanced so it can display relations between projects and markets. The projects can be colored by stage and by category, just like the Bubble chart. Projects can be filtered and grouped to create the roadmap visualization that best supports the portfolio decisions to be made. Milestones indicate the launch date.

Various

Feature	Description
Cannibalization	Cannibalization of products is improved and can now be more precisely specified (per product, not just per project). The cannibalization can also be configured to be partial.
Filter	The filtering of projects is changed so that now multiple values can be selected for a filter variable.
Password restrictions	The password restriction for sequences and words can be switched off.

Reporting	The reporting for Word reports has been improved. New is the inline styling.
Excel connector	Improved user interface and performance. Note that for using the Excel connector the Flighthub module is needed. Ask for pricing.
Input types	For the data input pages new input types have been added: date input and radio buttons

Logo	A (company) logo can be displayed in the title bar.
------	---

Bugs	Several minor bug fixes
